

Coach Interview Sheet - Offline Rowing IMU Dashboard

Goal: find out which metrics are genuinely useful for coaches, which are only interesting, and which would require better accuracy before they should be used for feedback. Please answer openly first, then answer the dashboard-specific questions after seeing the tool.

Part A - Open questions before seeing the dashboard

Question: Which technical mistakes or movement patterns do you most often see in your athletes?

Question: Which information is currently missing during or right after a training session?

Question: Which feedback format works best for your athletes: spoken coaching, audio signal, numbers, video, graphs, or something else?

Question: Which parts of the rowing motion are objectively measurable for you, and which parts do you prefer to judge visually?

Question: When is variation between strokes normal, and when would you treat it as a problem?

Question: Which metric would you show directly to an athlete, and which would you keep mainly for coach analysis?

Part B - Questions after a short dashboard demo

Please briefly show the Offline Dashboard: Time graph, Selected stroke, Stroke overlay, Stroke-by-stroke values, and athlete export. Then answer these questions.

Dashboard element	Interview question
Stroke detection tuning	Does the workflow of manually counting the first minute and then adjusting minimum gap and smoothing make sense? What would be too complicated?
Time graph	Can you quickly judge whether detection is plausible from SEAT and BOAT acceleration plus start/end lines?
Selected stroke	Could this view help you explain one specific stroke to an athlete?
Stroke overlay	Would it be useful to overlay strokes from different athletes when the time axis is not stretched? In which situations?
Strongest seat drive speed	Could the timing of maximum seat speed help discuss drive timing or leg work? What would need to be more accurate?
SEAT-BOAT peak acceleration	Is the highest relative acceleration useful as a drive-intensity cue, or is it too sensitive to bumps?
Smoothness	Could a jerkiness metric support technique feedback? When is jerkiness normal, and when is it a problem?
BOAT velocity change	Can a positive or negative BOAT velocity proxy change per stroke help discuss the effect on the boat?
Athlete report	Would a separate HTML report with athlete name, graphs, and coach comment be practical for your work?

Part C - Useful for feedback or only interesting?

For each metric, please judge whether it is directly usable for athlete feedback, useful with caution, only interesting for coach analysis, or not useful. Consider that some flexibility and variation is normal in rowing.

Metric	Direct feedback	Use with caution	Interesting only	Not useful	Comment
Stroke count / detection	☐	☐	☐	☐	
Stroke rate	☐	☐	☐	☐	
Rhythm consistency	☐	☐	☐	☐	
Strongest seat drive speed	☐	☐	☐	☐	
SEAT-BOAT peak acceleration	☐	☐	☐	☐	
Smoothness	☐	☐	☐	☐	
BOAT velocity change	☐	☐	☐	☐	
Selected-stroke graph	☐	☐	☐	☐	
Stroke overlay	☐	☐	☐	☐	
Athlete HTML report	☐	☐	☐	☐	

Part D - Multiple choice: Which dashboard metrics were interesting and usable?

1. Interesting and generally usable

☐ Stroke count / detection	☐ Stroke rate
---	--------------------------------------

☐ Rhythm consistency	☐ Strongest seat drive speed
☐ SEAT-BOAT peak acceleration	☐ Smoothness
☐ BOAT velocity change	☐ Selected-stroke graph
☐ Stroke overlay	☐ Athlete HTML report

2. Most suitable for direct technique feedback

☐ Stroke count / detection	☐ Stroke rate
☐ Rhythm consistency	☐ Strongest seat drive speed
☐ SEAT-BOAT peak acceleration	☐ Smoothness
☐ BOAT velocity change	☐ Selected-stroke graph
☐ Stroke overlay	☐ Athlete HTML report

3. Interesting, but currently only usable with caution

☐ Stroke count / detection	☐ Stroke rate
☐ Rhythm consistency	☐ Strongest seat drive speed
☐ SEAT-BOAT peak acceleration	☐ Smoothness
☐ BOAT velocity change	☐ Selected-stroke graph
☐ Stroke overlay	☐ Athlete HTML report

Part E - Ranking

If several metrics were useful, please rank the most important ones. Rank 1 is the most important.

Rank	Metric	Why this metric?
1		
2		
3		
4		
5		

Which metrics need better accuracy before you would actively use them for feedback?

Rank	Metric	What accuracy or display improvement is missing?
1		
2		
3		

Part F - Closing questions

Question: Which metric would you remove because it may confuse coaches?

Question: Which metric is still missing for judging rowing technique more meaningfully?

Question: Should the system give feedback live as audio, later in the HTML report, or both?

Question: Which statement should the system never make automatically because it depends too much on context?
