

# Coach Interview Sheet

This sheet is for rowing coaches evaluating the offline IMU dashboard. The goal is to understand which displayed metrics are understandable, which could support coaching decisions, and where more context would be needed before using them with athletes.

## Part A - Coaching perspective before using the dashboard

**Question:** Which recurring technical patterns do you most often try to correct?

**Question:** Is it always clear whether one stroke was better than another, or is that mainly based on coaching experience? Could a tool support this judgement?

**Question:** Would real-time feedback make sense in training? If yes, how should the athlete receive it?

**Question:** When comparing two strokes, what makes one stroke better in your coaching judgement?

**Question:** How do you decide whether stroke-to-stroke variation is helpful, normal, or a problem?

**Question:** If you had to improve an athlete using only one metric, which metric would you choose?

## Part B - After seeing the dashboard

Please use the dashboard briefly, then answer whether each view is understandable and how it could support coaching.

| Dashboard element          | Coach question                                                                    |
|----------------------------|-----------------------------------------------------------------------------------|
| Stroke detection tuning    | Is the drive-start based tuning understandable enough to use before analysis?     |
| Time graph                 | Can you quickly judge whether the detected stroke starts and ends look plausible? |
| SEAT-only acceleration     | Could this help explain drive intensity or unstable seat movement?                |
| Selected stroke            | Could this help discuss a specific stroke with an athlete?                        |
| Stroke overlay             | Could comparing strokes support coaching feedback?                                |
| Strongest seat drive speed | Could this timing cue help discuss drive timing or leg work?                      |
| Smoothness                 | Is the meaning of smoothness clear enough to use in feedback?                     |
| Change of boat speed       | Could this help discuss whether a stroke helped the boat movement?                |
| Athlete report             | Would an exported HTML report with a coach comment be useful?                     |

## Part C - Metric usefulness

Please rate whether each metric is understandable and useful. If a metric is not useful yet, note what explanation or context is missing.

| Metric                      | Clear meaning            | Useful for coaching      | Needs more context       | Comment |
|-----------------------------|--------------------------|--------------------------|--------------------------|---------|
| Change of boat speed        | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |         |
| Stroke rhythm               | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |         |
| Stroke timing               | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |         |
| Strongest seat drive speed  | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |         |
| SEAT-only peak acceleration | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |         |
| Smoothness                  | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |         |
| Stroke overlay              | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |         |
| Athlete report              | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |         |

## Part D - Select and rank

Which metrics would you consider using?

|                                                      |                                                     |
|------------------------------------------------------|-----------------------------------------------------|
| <input type="checkbox"/> Change of boat speed        | <input type="checkbox"/> Stroke rhythm              |
| <input type="checkbox"/> Stroke timing               | <input type="checkbox"/> Strongest seat drive speed |
| <input type="checkbox"/> SEAT-only peak acceleration | <input type="checkbox"/> Smoothness                 |
| <input type="checkbox"/> Stroke overlay              | <input type="checkbox"/> Athlete report             |

Rank the most useful metrics

| Rank | Metric | Reason |
|------|--------|--------|
| 1    |        |        |
| 2    |        |        |
| 3    |        |        |
| 4    |        |        |
| 5    |        |        |

## Part E - Final feedback

**Question:** Which dashboard view should be simplified most?

**Question:** Which missing metric would make the dashboard more useful?

**Question:** Should feedback be live, post-session, or both?

**Question:** What should the system avoid claiming automatically?
