

Coach Interview Sheet

This sheet is for rowing coaches evaluating the offline IMU dashboard. The goal is to understand which displayed metrics are understandable, which could support coaching decisions, and where more context would be needed before using them with athletes.

Part A - Coaching perspective before using the dashboard

Question: Which recurring technical patterns do you most often try to correct?

Question: Is it always clear whether one stroke was better than another, or is that mainly based on coaching experience? Could a tool support this judgement?

Question: Would real-time feedback make sense in training? If yes, how should the athlete receive it, for example vibration on an arm device when metric X crosses a threshold? Which metric could make sense in real time?

Question: When comparing two strokes, what makes one stroke better in your coaching judgement?

Question: How do you decide whether stroke-to-stroke variation is helpful, normal, or a problem?

Question: If you had to improve an athlete using only one metric, which metric would you choose? For example, could boat velocity change be useful, or would another metric be more meaningful?

Part B - After seeing the dashboard

Please use the dashboard briefly, then answer whether each view is understandable and how it could support coaching.

Dashboard element	Coach question
Stroke detection tuning	Is the drive-start based tuning understandable enough to use before analysis?
Time graph	Can you quickly judge whether the detected stroke starts and ends look plausible?
SEAT-only acceleration	Could this help explain drive intensity or unstable seat movement?
Selected stroke	Could this help discuss a specific stroke with an athlete?
Stroke overlay	Could comparing strokes support coaching feedback?
Strongest seat drive speed	Could this timing cue help discuss drive timing or leg work?
Smoothness	Is the meaning of smoothness clear enough to use in feedback?
Change of boat speed	Could this help discuss whether a stroke helped the boat movement?
Athlete report	Would an exported HTML report with a coach comment be useful?

Part C - Metric usefulness

Please rate whether each metric is understandable and useful. If a metric is not useful yet, note what explanation or context is missing.

Metric	Clear meaning	Useful for coaching	Needs more context	Comment
Change of boat speed	☐	☐	☐	
Stroke rhythm	☐	☐	☐	
Stroke timing	☐	☐	☐	
Strongest seat drive speed	☐	☐	☐	
SEAT-only peak acceleration	☐	☐	☐	
Smoothness	☐	☐	☐	
Stroke overlay	☐	☐	☐	
Athlete report	☐	☐	☐	

Part D - Select and rank

Which metrics would you consider using?

☐ Change of boat speed	☐ Stroke rhythm
☐ Stroke timing	☐ Strongest seat drive speed
☐ SEAT-only peak acceleration	☐ Smoothness
☐ Stroke overlay	☐ Athlete report

Rank the most useful metrics

Rank	Metric	Reason
1		
2		
3		
4		
5		

Part E - Final feedback

Question: Which dashboard view should be simplified most?

Question: Which missing metric would make the dashboard more useful?

Question: Should feedback be live, post-session, or both?

Question: Should the system start claiming things like weak leg drive if peak velocity is reached too late? Is the system functioning well enough for such a metric to make sense?
