

Coach Interview Sheet - Offline Rowing IMU Dashboard

Goal: find out which metrics are genuinely useful for coaches, which are only interesting, and which would require better accuracy before they should be used for feedback. Please answer openly first, then answer the dashboard-specific questions after seeing the tool.

Part A - Open questions before seeing the dashboard

Question: Which technical mistakes or movement patterns do you most often see in your athletes?

Question: Is it always clear to you whether one stroke was better than another, or is this mainly based on coaching experience? Could a tool make this judgement easier?

Question: Do you think real-time coaching feedback would make sense? If yes, how should the athlete receive it, for example through audio, vibration, or another signal? For which metric would such feedback be useful?

Question: When comparing two strokes, what makes one stroke better than another in your coaching judgement?

Question: How do you decide whether variation between strokes is helpful, normal, or a problem? What exactly do you look at?

Question: If you had to judge an athlete only through metrics and improve them only by changing one metric, which metric would you choose? For example, would you focus on change of boat speed, rhythm, stroke timing, smoothness, or something else?

Part B - Questions after a short dashboard demo

Please briefly show the Offline Dashboard. Keep the explanation simple: Time graph, selected stroke, stroke overlay, stroke-by-stroke values, and athlete export.

Dashboard element	Interview question
Stroke detection tuning	Does tuning minimum gap from manually marked drive starts feel practical for you?
Time graph	Can you quickly see whether the detected stroke starts and ends look plausible?
SEAT-only acceleration	Could seat acceleration help you explain drive intensity or unstable movement to an athlete?
Selected stroke	Could this view help you discuss one specific stroke with an athlete?
Stroke overlay	Would comparing strokes from the same or different athletes be useful for coaching?
Strongest seat drive speed	Could the timing of the fastest seat movement help discuss drive timing or leg work?
Smoothness	Could a smoothness value help identify strokes that look too jerky or unstable?
Change of boat speed	Could this help discuss whether a stroke seemed to help or slow the boat?
Athlete report	Would a separate HTML report with athlete name, graphs, and coach comment be practical?

Part C - Useful for feedback or only interesting?

For each metric, please judge whether it is directly usable for athlete feedback, useful with caution, only interesting for coach analysis, or not useful. Consider that some flexibility and variation is normal in rowing.

Metric	Direct feedback	Use with caution	Interesting only	Not useful	Comment
Change of boat speed	☐	☐	☐	☐	
Stroke rhythm	☐	☐	☐	☐	
Stroke timing	☐	☐	☐	☐	
Strongest seat drive speed	☐	☐	☐	☐	
SEAT-only peak acceleration	☐	☐	☐	☐	
Smoothness	☐	☐	☐	☐	
Stroke overlay	☐	☐	☐	☐	
Athlete HTML report	☐	☐	☐	☐	

Part D - Multiple choice: which dashboard metrics were interesting and usable?

1. Interesting and generally usable

☐ Change of boat speed	☐ Stroke rhythm
☐ Stroke timing	☐ Strongest seat drive speed
☐ SEAT-only peak acceleration	☐ Smoothness
☐ Stroke overlay	☐ Athlete HTML report

2. Most suitable for direct technique feedback

☐ Change of boat speed	☐ Stroke rhythm
☐ Stroke timing	☐ Strongest seat drive speed
☐ SEAT-only peak acceleration	☐ Smoothness
☐ Stroke overlay	☐ Athlete HTML report

3. Interesting, but currently only usable with caution

☐ Change of boat speed	☐ Stroke rhythm
☐ Stroke timing	☐ Strongest seat drive speed
☐ SEAT-only peak acceleration	☐ Smoothness
☐ Stroke overlay	☐ Athlete HTML report

Part E - Ranking

If several metrics were useful, please rank the most important ones. Rank 1 is the most important.

Rank	Metric	Why this metric?
1		
2		
3		
4		
5		

Which metrics need better accuracy before you would actively use them for feedback?

Rank	Metric	What accuracy or display improvement is missing?
1		
2		
3		

Part F - Closing questions

Question: Which metric would you remove because it may confuse coaches?

Question: Which metric is still missing for judging rowing technique more meaningfully?

Question: Should the system give feedback live, later in the HTML report, or both?

Question: Which statement should the system never make automatically because it depends too much on context?
